[Vettingof OSE II for the BP Deep Horizon Spill of 201 emails scrubbed.pdf](#)

Dear RRT VI Coast Guard, EPA and all members,

The previous emails may have not reached all the intended members, and even though I have asked the EPA and Coast Guard to make sure each member received the information contained in the OSEI Corporation emails; the request for approval, and use permits for the BP spill will be sent in three emails due to the size of the attachment files. The attachment with the approval request for the Gulf spill, and permanent pre approval, that proves OSE II should be pre approved is denoted EPA\_RRT\_counter\_for\_demonstration\_decision\_July 1st 2011.doc... The rest of the attached documents are for support of the request.

EMAIL #2

To All involved in the RRT VI,

Attached are several documents regarding the importance of having the RRT immediately issue the necessary permit for the non-toxic product called OSE II to be implemented as a cleanup tool for BP's Deepwater Horizon oil blow out response.

1) The first document is the scientific basis and reasoning per the Oil Spill Selection Guide, established by Regions III and IV, to immediately approve OSE II for the cleanup response to this spill.

2) Several other documents, including correspondence between the OSEI Corporation and the US EPA that clarify concerns that have been expressed and resolved.

9550921

This package of information addresses and should fully resolve every possible question an RRT official might have regarding this issue. I request the EPA and Coast Guard members of Region VI RRT to make sure anyone that is a member of RRT VI who will not receive this email directly from Steven Pedigo, OSEI Corporation be given a copy as well.

In light of all of the above, I, Steven R. Pedigo the individual, and the OSEI Corporation hereby request the immediate approval of the implementation of OSE II, and that a permit be issued for the use of OSE II on BP's Deepwater Horizon Macondo oil blowout in the waters of the Gulf of Mexico that began, per reports, on April 20, 2010.

Also, in light of all of the above, I, Steven R. Pedigo the individual, and the OSEI Corporation hereby request the immediate permanent pre-approval of OSE II for US navigable waters of Region VI.

I await your quick response and issuance of the permit to the OSEI Corporation for the application of OSE II on the Deepwater Horizon oil. The Coast Guard has requested its immediate implementation and, with the attached package of information in hand, there is now no viable or scientific reason why it should not be immediately authorized for use.

Please send confirmation and/or the documents for both formal requests above as soon as possible.

Sincerely,  
Steven Pedigo

PS This link below will allow you to track the correspondence between the OSEI Corporation and the EPA.

**Oil Spill Eater II**

The EPA Time Track here shows how Oil Spill Eater should have been used sooner on the clean up in Gulf and still should be used. <http://bit.ly/m1xCtq>
